PARSA NIAVAND

QA Engineer | Software Engineer in Test

vvsparsa@gmail.com · linkedin.com/in/parsany · github.com/parsany · parsany.com · +374 33 877 067 · Yerevan, Armenia

SUMMARY

Software engineering and quality assurance professional with a Computer Science degree and 3 years of commercial production experience delivering web, mobile, and API systems. Combines strong code comprehension with rigorous exploratory testing, isolating root causes from minimal logs, reproducing elusive edge cases, and authoring clear bug reports for core developers. Experienced analyzing runtime traces and working with Gradle build scripts, Docker containers, and relational databases. Comfortable reading application source and build configurations to isolate issues. Fluent in English (C2) with direct experience driving software stability across collaborative, fast-paced teams.

TECHNICAL SKILLS

Testing & QA: Manual Exploratory Testing · Regression Testing · Edge-Case Reproduction · Boundary Analysis · Test Planning · Defect Reporting

Automation & Tools: Playwright (E2E/Smoke) · Postman (API Testing) · Swagger/OpenAPI · GitHub Actions CI/CD · Git · ClickUp · Trello

Languages & Backend: TypeScript · JavaScript · Python · Java · SQL · Node.js / NestJS

Ecosystem & Platforms: Gradle Builds · Docker Containers · Linux (Ubuntu/Bash) · PostgreSQL · Redis · WebSockets

PROFESSIONAL EXPERIENCE

QA Engineer & Software Engineer | Codesheen

Oct 2023 – Jul 2026

Full-time, On-site

- Owned quality assurance workflows across **8+ concurrent commercial systems**, balancing structured manual exploratory testing with automated test runs before production releases.
- Triaged defect backlogs in ClickUp, reproducing subtle edge cases from minimal logs, and delivering actionable defect reports with network payloads, error traces, and reproduction steps.
- Enforced automated quality gates in **GitHub Actions CI/CD pipelines**, verifying REST/WebSocket API schemas via Postman and preventing production regressions.
- Maintained test environments and staging databases using Docker containers and Linux shell scripts, ensuring reliable test parity with production environments.

Key Tested Platforms & Project Deliverables:

Atrafian Real-Time Platform [Live Demo] [App Demo] · *Jan 2026 – Mar 2026*

- Verified Android mobile application builds configured and compiled with **Gradle**, validating build dependencies, build flavors, and real-device installation flows.
- Executed exploratory testing under simulated network drops and reconnections, uncovering state synchronization race conditions between local store state and Socket.io events in 1,000+ user rooms.

Goldenbat IoT GPS Telemetry Platform [Live Demo] · *Sep 2024 – Jan 2025*

- Executed boundary and telemetry verification on an IoT fleet tracking platform processing **10,000+ coordinates/min**, isolating dropped WebSocket frames under traffic surges.
- Validated live GIS/Mapbox rendering, geofencing triggers, and automated alert dispatching across mobile and web interfaces.

Battery ESP/MSK Warranty & E-Commerce Portal [Live Demo] · *Dec 2025 – June 2026*

- Tested serial-number cryptographic validation engines against PostgreSQL databases; wrote Playwright automation scripts for admin verification workflows.
- Validated multilingual (i18n) rendering, admin CRUD flows, and cross-browser consistency against Figma specifications.

Taxiland Mobility & Dispatch Platform *May 2024 – Aug 2024*

- Conducted end-to-end testing of driver dispatch and passenger ride requests; validated tRPC endpoints, driver state transitions, and error boundary handling.
- Simulated network latency and location polling edge cases between mobile clients and the dispatch backend to verify reconnection recovery.

EDUCATION

Science and Research Branch (SRBIAU) *Graduated 2026*

B.S. in Computer Science

Core Coursework: Object-Oriented Programming (Java/C++), Data Structures & Algorithms, Operating Systems, Compilers, Software Engineering Methodologies.

CORE COMPETENCIES

- **Root-Cause Edge-Case Hunting**
- **Production Stability & Zero Regressions**
- **Developer Tooling & Build Systems**
- **Automating Repetitive Workflows**
