Automation-focused Fullstack Engineer with 3 years of production experience across web, mobile, and API architectures. Combines full-stack development depth with rigorous testing practices — manual exploratory cycles, API validation (REST/WebSocket via Postman), and Playwright automation scripts for user flow verification and regression checking. Enforces quality gates in GitHub Actions CI/CD pipelines and communicates fluently in English throughout the development and testing lifecycle.

PROFESSIONAL EXPERIENCE

Fullstack Engineer

Full-time, On-site

Codesheen

Oct 2023 – Jul 2026

- Utilized **Playwright** and **automation scripts** for E2E user flow verification, regression checking, and cross-browser validation across production web applications.
- Conducted structured manual functional, regression, and exploratory testing on web and mobile (Capacitor.js PWA, real-device builds) throughout 3 years. Validated UI implementation against Figma specs, executed edge-case and negative-path scenarios, filed detailed bug reports, and re-verified resolved defects.
- Structured test scripts using **Page Object Model** patterns with reusable page abstractions across Turborepo monorepo projects, keeping automation maintainable as features evolved.
- Validated REST and WebSocket communication using **Postman** while building and consuming them daily; verified schema correctness, response integrity, and edge-case handling against Swagger contracts.
- Integrated automated test pipelines into **GitHub Actions CI/CD workflows**, enforcing quality gates before production deployments across Turborepo monorepo projects.
- Documented, triaged, and tracked defects using Trello, ClickUp, and Notion; communicated root causes, reproduction steps, and risk assessments to developers and stakeholders in English.
- Provided production debugging support for PWA, REST API, WebSocket, and hardware telemetry issues, tracing failures across frontend and backend systems and verifying fixes through re-testing.

Selected Project Test Coverage:

Battery ESP/MSK E-Commerce

Dec 2025 – Jun 2026

[Live Demo](#) | [Dashboard](#)

Wrote Playwright automation scripts for the serial-number warranty verification flow; manually validated bilingual i18n rendering, admin CRUD workflows, and cross-browser UI against Figma specs. Tested API responses via Postman for correctness and schema consistency.

Goldenbat GPS Tracking

Sep 2024 – Jan 2025

[Live Demo](#) | [Dashboard](#)

Manually tested the PWA and fleet dashboard end-to-end. Verified live device location updates, geofence boundary triggers, and push notification delivery across real Android builds. Debugged Celery workers for the notification system and validated WebSocket message integrity under continuous high-frequency coordinate streams (10,000+ coords/min).

Alzahra Gold Wholesaler B2B Platform

Mar 2024 – Apr 2024

[Live Demo](#)

Tested multi-step purchasing workflows and buyer dashboard against the Django REST API; validated dynamic gold price updates, session state persistence, and cross-browser layout consistency while verifying a desktop Lighthouse score of 99.

Taxiland Ride-Sharing Platform

May 2024 – Aug 2024

Archived MVP

Manually tested driver dispatch and support ticketing flows end-to-end; validated tRPC endpoints for ride assignment logic, driver state transitions, and error boundary behavior on both the passenger app and admin panel.

SELECTED PROJECTS

Atrafian Chat & Social Ecosystem

Jan 2026 – Mar 2026

[Landing Demo](#) | [App Demo](#)

Tested Socket.io chat flows, FCM push notifications, and media uploads; validated optimistic UI against WebSocket sequences in rooms of **1,000+ concurrent users** with sub-second message delivery.

SKILLS

Test Automation: Playwright, Playwright Test, E2E, API Automation, Page Object Model.

Tools: Postman, Swagger/OpenAPI, DevTools, GitHub Actions, Docker, Git, Trello, ClickUp.

Manual Testing: Functional, Regression, Exploratory, Cross-browser, Mobile (Capacitor.js).

Backend & Infra: Node.js, NestJS, REST, WebSockets, PostgreSQL, Redis, Linux, DNS/SSL.

Languages: TypeScript, JavaScript, Python, SQL.

Spoken Languages: English (Fluent, C2), Persian (Native).

EDUCATION

B.S. in Computer Science Graduated 2026

Science and Research Branch (SRBIAU)
