Experience Peace of Mind with Cutting-Edge Security

Since its inception in 2002, Golden Bat has been at the forefront of vehicle security innovation. We understand that your fleet is the lifeblood of your business. Our mission is to provide robust, reliable, and intelligent tracking solutions that empower you to protect your assets and optimize your operations with confidence.

Why Choose Golden Bat?

1. Total Fleet Command

Gain absolute control over your vehicles. Our system provides real-time location data, status updates, and comprehensive oversight, ensuring you always know where your assets are and how they are performing.

2. Comprehensive Trip Intelligence

Access detailed reports on every journey. Analyze trip durations, stop times, and distance traveled to identify inefficiencies and improve route planning for maximum productivity.

3. Uninterrupted Connectivity

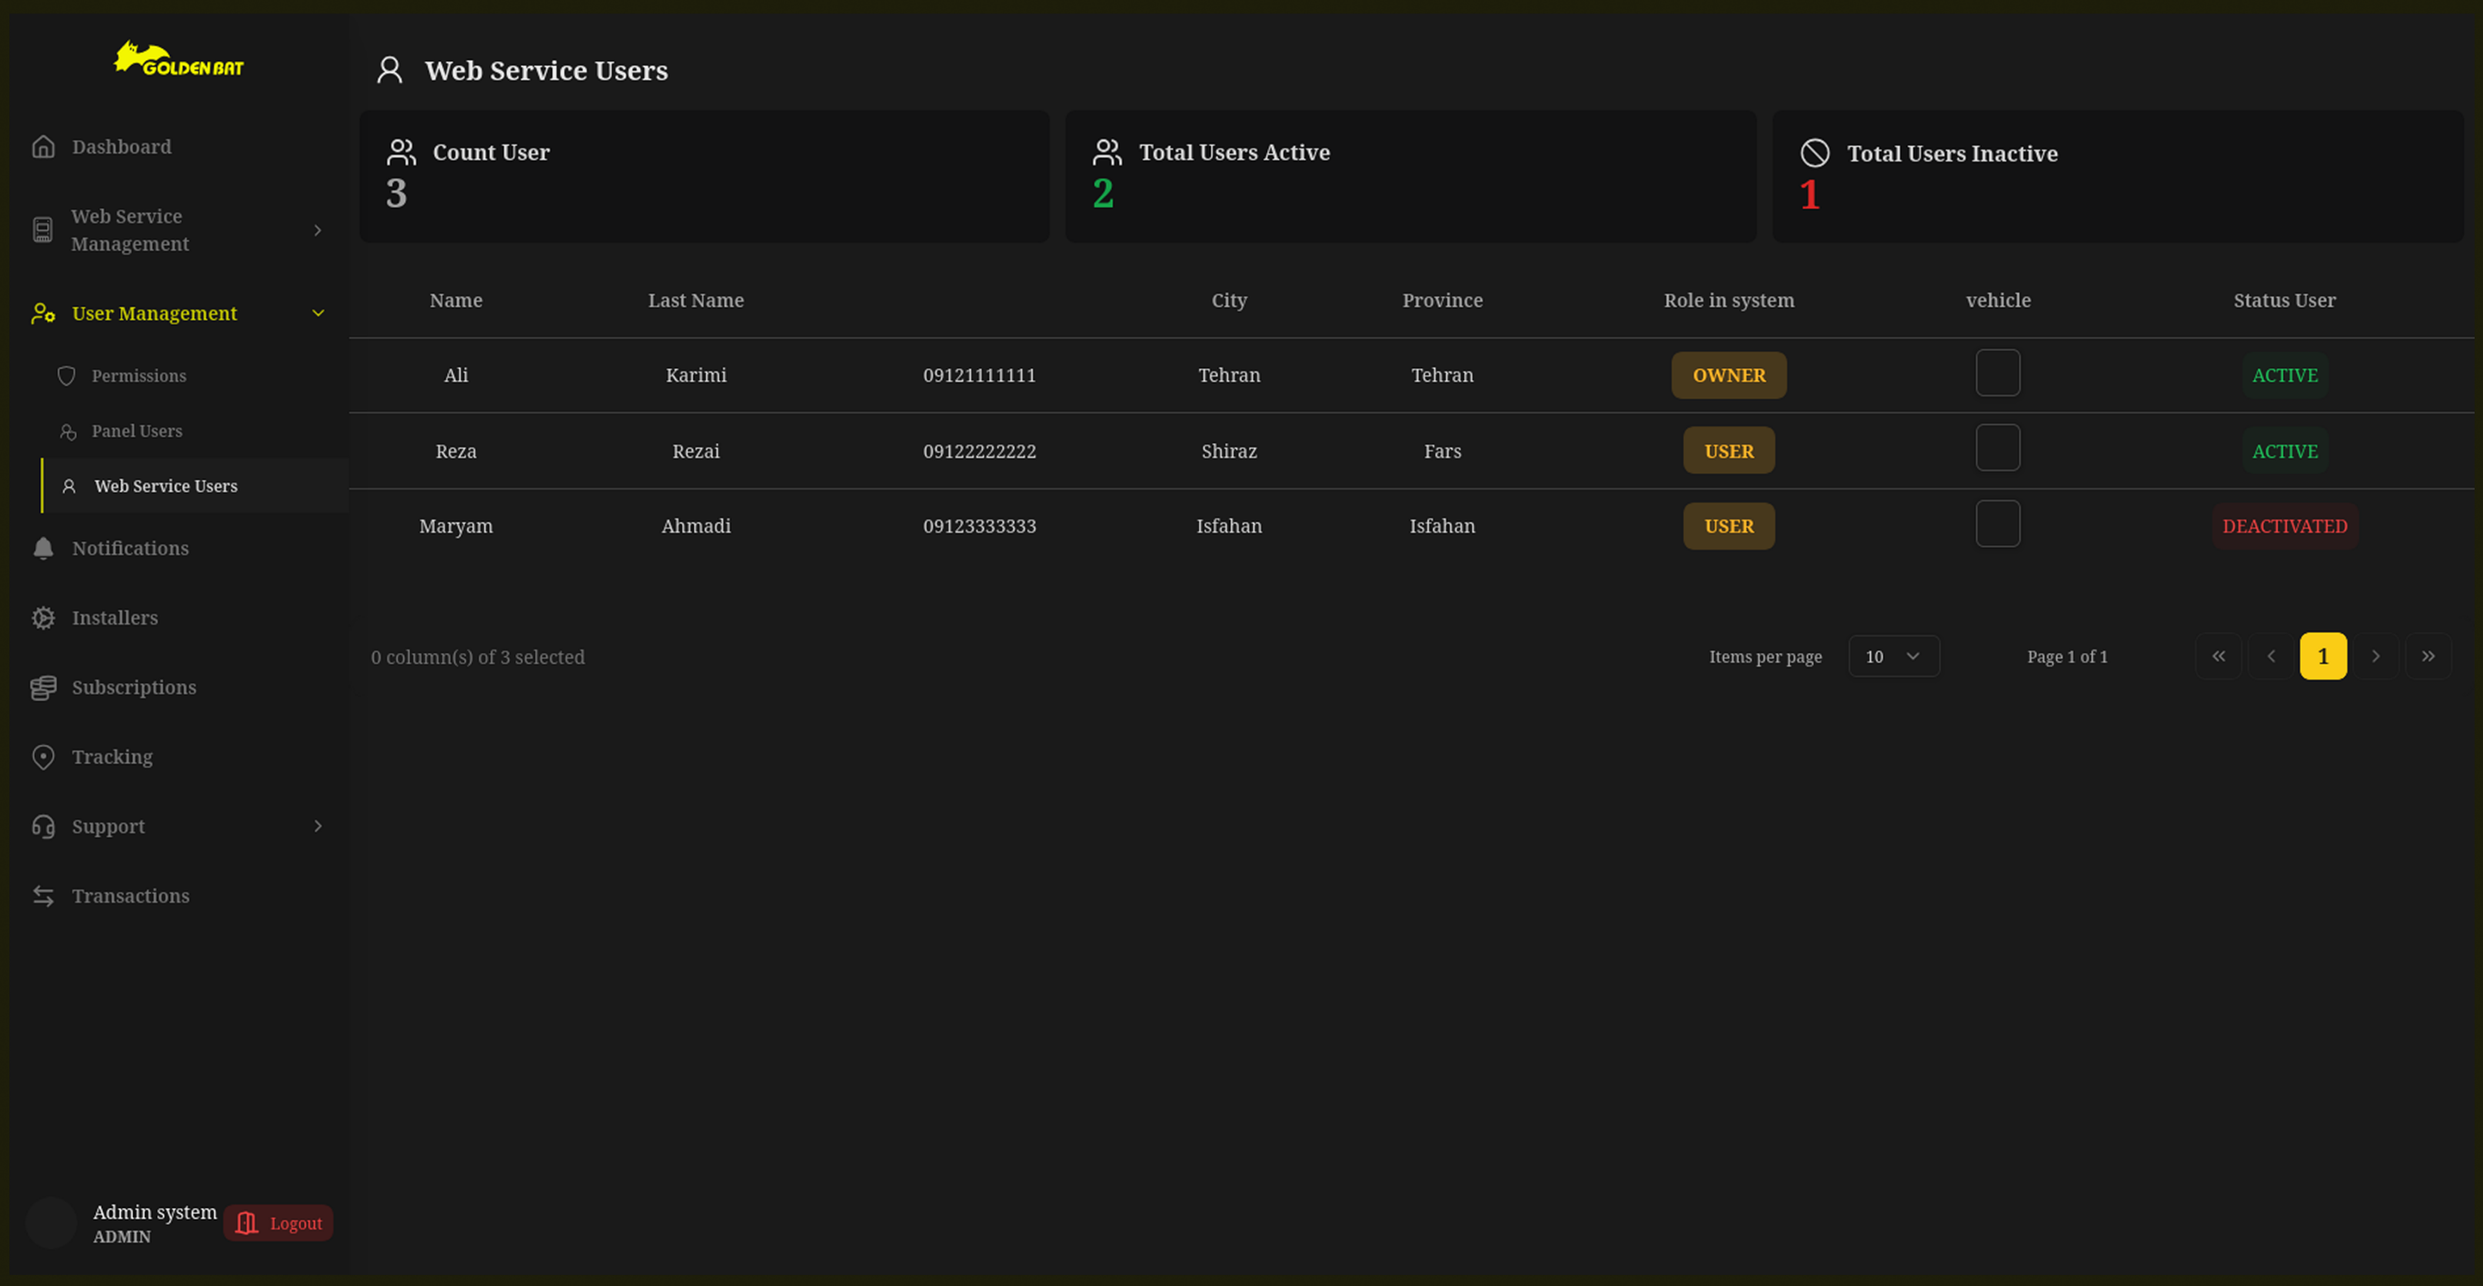
Reliability is paramount. Our advanced hardware and network infrastructure ensure consistent data transmission, minimizing blind spots and keeping you connected to your fleet around the clock.

4. Dynamic Route Playback

Visualize past movements with precision. Our route playback feature allows you to retrace vehicle paths on the map, providing valuable context for incident investigation and operational review.

User Management

The user management system in this platform enables precise management of roles and permissions. Using this system, you can define different levels of access for each user or group of users (Role-Based Access Control - RBAC). This includes items such as accessing different parts of the system, creating, editing, or deleting information. It also provides the ability to enable or disable users, manage web service and panel users, and perform modifications (edits) for users. This feature provides administrators with complete control over the permissions and activities of users.



User Features

Advanced role management and financial oversight tools.

DEVICE & TRACKING MANAGEMENT

The GoldenGPS management system offers comprehensive tools to streamline your fleet operations and device administration:

1. ADVANCED DEVICE VARIANT SYSTEM

Define different GPS models and hardware versions separately. Manage distinct configurations for
each variant to ensure precise tracking capabilities across your diverse inventory.

2. CATEGORICAL TRACKING GROUPS

Organize your fleet into hierarchical groups for better monitoring. Create main fleets, sub-fleets, and
operational zones to maintain structure and simplify large-scale management.

3. SPECIFIC DEVICE TECHNICAL SPECS

Detailed fields for IMEI, ICCID, and hardware revision. Store critical technical data for every unit,
allowing for instant identification and streamlined troubleshooting.

4. MULTI-VIEW IMAGE LIBRARY

Upload different device photos and installation diagrams. Provide technicians with visual references for
proper installation and device identification in the field.

5. SUBSCRIPTION & LICENSE MANAGEMENT

Define service tiers and subscription costs in currency or percentage. Automate renewal tracking and
pricing calculations for your client base effortlessly.

6. COLOR-CODED MAP MARKERS

Assign distinct colors to different device types for clear map visualization. Instantly distinguish between vehicle types, status, or priority levels on the live tracking map.

GPS Device Management

Manage hardware models, configurations, and subscription plans.

Add New commands

To add a new command for this device brand, please fill out the following details carefully.

Name command

Enter a command title (e.g. Engine Cut-off, Engine Start, etc.)

command

Enter your target command and enclose any variables in curly braces like {SERVER_ADDRESS}

Type command

The command type identifies remote control actions for each device type.

Usable from client application

Transaction Management

Gain complete financial visibility and control. Our comprehensive transaction system offers precise tracking, automated reporting, and detailed logs for every financial interaction within your fleet management operations.

Real-time Payment Tracking:

Monitor all incoming subscription payments and renewals instantly. Stay updated with live status changes as transactions are processed.

Detailed Financial Breakdown:

Transparent viewing of taxes, discounts, and final amounts for every transaction. Understand exactly where every cent goes with granular financial data.

Advanced Filtering & Search:

Quickly find records by User, IMEI, Date, or Transaction ID. Our powerful search engine cuts through thousands of records in milliseconds.

Subscription Lifecycle Overview:

Track the financial history of every device from first activation to current status. visualize the entire monetary journey of your assets.

Automated Receipt Generation:

System-generated digital invoices for every successful payment. Reduce administrative overhead with automatic documentation.

Multi-currency & Payment Logs:

Comprehensive logging of payment methods and currency conversions. Handle international operations with clear, standardized logs.

UNIFIED SUPPORT

Experience seamless technical assistance with our centralized support ecosystem. Designed for efficiency, our platform connects you directly with experts while providing transparent tracking of every interaction to ensure your fleet operations never miss a beat.

01 SMART TICKETING INFRASTRUCTURE

Submit and manage technical inquiries through an intelligent dashboard. Our system automatically categorizes requests based on urgency and topic, routing them to the most qualified specialists for faster resolution times.

02 REAL-TIME STATUS TRACKING

Stay informed with live updates on your support tickets. View the exact stage of your request, from initial review to engineering analysis and final deployment, ensuring complete transparency throughout the support lifecycle.

03 DIRECT EXPERT COMMUNICATION

Bypass automated bots and communicate directly with our dedicated engineering team. Use the integrated chat interface to share logs, screenshots, and location data securely, facilitating precise troubleshooting.

04 AUTOMATED ALERT NOTIFICATIONS

Receive instant notifications via SMS, email, or in-app alerts whenever there is progress on your case. Customize your notification preferences to ensure critical updates reach the right team members immediately.

05 COMPREHENSIVE TICKET ARCHIVE

Access a complete history of all past interactions and resolutions. This searchable archive serves as a personalized reference library for your organization, helping you identify recurring patterns or review past solutions.

06 KNOWLEDGE BASE INTEGRATION

Seamlessly connected to our extensive documentation library. While waiting for a response, the system suggests relevant articles and guides based on your ticket description, often providing immediate self-service solutions.
